

User manual GRENTON SMART PANEL WiFi WSP-204-W-0x

Replacing traditional wall switches, Grenton Smart Panel WiFi allows to control not only the light, but also any device in a smart home. The Panel provides information from sensors, system parameters or its functional data. The versatile and intuitive control interface makes it easy and quick to control an individual device or the whole home. It contains the Common Logic Unit (CLU) with WiFi wireless communication controller, executes the function of processing logic and storing the configuration.

1. Technical Data

Device power supply	230 V _{ac}
Average power consumption	<1.0 W
Maximal wire cross section	2,5 mm ²
WiFi frequency band	2,4 GHz
Weight	120 g
Dimensions (H/W/D)	surface part: 80/80/10 mm, concealed part: Ø 50 mm / h:22 mm
Operating temperature range	0 to +45 °C

2. Wiring diagram

3. Wireless communication configuration

The brand new device on power up starts with the AP (access point) SSID: CLU47xxxxxxx [reset] with the factory password (PIN) "00000000". After connection setup with the AP server connect to the device http server using web browser and <http://192.168.4.1> link. Next please set up a PIN and a WiFi network parameters, the WiFi network the device is meant to be connected to. The PIN is the new AP password and the

"Secret Key" used by the Object Manager tool during the discovery process as well. In case of connection failure with the previously configured WiFi network Smart Panel starts with the AP SSID: CLU47xxxxxxx after 2 minutes of unsuccessful retries. After 10 minutes from the power on the AP is deactivated and the Smart Panel only keeps trying to connect to the configured WiFi network.
